

Media

Within POWER simulations, animations and interactive tools have been developed next videos and pictures.

POWER video

The Interreg IIIb North Sea secretariat in Viborg Denmark initiated the production of this short video about the POWER project. This film gives an overview of the activities and the transnational co-operation of POWER.

Thorntonbank wind versus energy production model

The Autonomous Port of Oostende has developed a flash wind simulation as part of the exhibition in its visitors centre.

This animation shows the energy production on the example of one 5 megawatt wind turbine at different wind speeds. It is in French, English, German and Dutch.

You will need to download the animation to your computer and start it there.

[Please download the simulation *.zip file here \(7mB\).](#) After downloading and unpacking the file select the 'presentatie2.exe' to start the animation.

Videos

You can view three videos here. The POWER video was initiated by the Interreg IIIb North Sea secretariat in Viborg Denmark and it gives a general explanation of the POWER project. The Thorntonbank video is a film about the construction of the offshore wind farm at the Belgian coast and the Windfilm is a film about the use of wind energy and it has been produced for the exhibition "Wind Force | The Exhibition" which will be integrated into the major tourist attraction the Klimahaus (r) in Bremerhaven, Germany. Please allow the videos some time for loading.
